

FitBuddy – AI Fitness Planner

Project Ideation, Problem Definition & Requirements

- Identify the problem: users need a simple way to receive personalized fitness guidance.
- Define FitBuddy's objective: generate a workout and nutrition plan from user-provided information.
- Identify inputs: username, age, weight, fitness goal and workout intensity.
- Define outputs: an AI-generated fitness plan displayed through a web interface.
- Technology stack: Python, FastAPI, Gemini Flash, SQLite, HTML, Jinja2 and CSS.

Project Stack: FastAPI, Python, Gemini Flash, SQLite, SQLAlchemy, HTML, Jinja2 and CSS.
