

FitBuddy – AI Fitness Planner

Data, Database & Application Design

- Design the flow from user input to AI-generated fitness plan.
- Create SQLite storage for user information and generated plans.
- Use SQLAlchemy for database models and database operations.
- Store user ID, username, age, weight, goal and intensity.
- Store original plan, updated plan and nutrition tip.

Project Stack: FastAPI, Python, Gemini Flash, SQLite, SQLAlchemy, HTML, Jinja2 and CSS.
