

FitBuddy – AI Fitness Planner

Phase 3

Backend Development with FastAPI

Project: FitBuddy – AI Fitness Planner

Technology: FastAPI, Gemini Flash, SQLite, HTML, Jinja2 and CSS

Phase Objectives and Activities

- Build the FastAPI application and organize the backend routes.
- Create form handling for collecting user fitness information.
- Connect FastAPI to SQLite through SQLAlchemy.
- Implement operations for saving, retrieving, updating and deleting users and plans.
- Create routes for generating workouts and submitting feedback.

Expected Outcome: This phase contributes to the development of the complete FitBuddy AI fitness planning application.
