

FitBuddy – AI Fitness Planner

Phase 6

Testing, Debugging, Documentation & Demonstration

Project: FitBuddy – AI Fitness Planner

Technology: FastAPI, Gemini Flash, SQLite, HTML, Jinja2 and CSS

Phase Objectives and Activities

- Run the application locally with FastAPI/Uvicorn.
- Test the complete flow from user input to generated plan.
- Check database operations and user/plan retrieval.
- Fix issues such as missing users, template errors, form-field mismatches and configuration problems.
- Document the project, prepare the demonstration, and present FitBuddy from start to end.

Expected Outcome: This phase contributes to the development of the complete FitBuddy AI fitness planning application.
